Service Robots

Service Robots provide labor force gain by serving the products demanded by customers in service sectors such as restaurants, cafeterias and hotels.

Features

- Our robot has autonomous working principle with mapping system.
- By programming with autonomous navigation feature, you can enable it to navigate and work on its own without hitting obstacles.
- You can provide service through the interface screen.
- With QrMenu integration, the robot can take orders from customers.
- With Wolvox Restaurant integration, you can deliver your orders with the robot.
- It has the ability to serve tea, coffee and food to your staff and guests. In addition, the robot can carry your documents, documents and files between units.
- Our robot plans its work according to the current charge / power balance. It decides that it needs to charge according to the set charge percentage.
- Having an easy-to-clean surface allows you to provide a more hygienic service.
- It can give the specified sentences as a voice notification (For example: 'Bon appetit', 'Welcome' etc.).

Technical Specifications

Project Start Date

14.06.2024

Project End Date

27.09.2024

Maximum Speed

1,0 m/s

Working Time

8 Hours

Battery

Lithium Ion

Autonomous Navigation

There is

Voice Notification Languages

Turkish, English

Dimensions

60x50x146 cm

Control

AR Mobile, AR-Service

Shelf Number / Size

3 Pieces / Ø 30 cm

Shelf Carrying Weight

5 Kg

Autonomous Charging

There is

Total Weight

43 Kg

Sensors

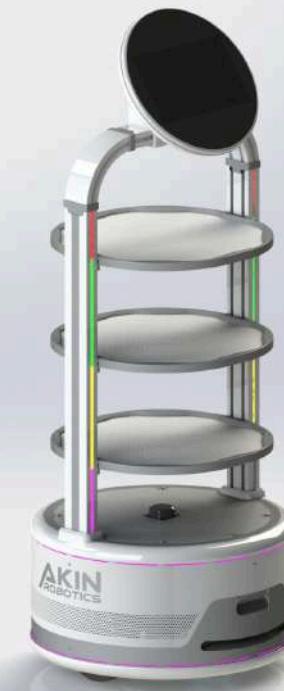

Lidar, Fall Protection

Autonomous Charging

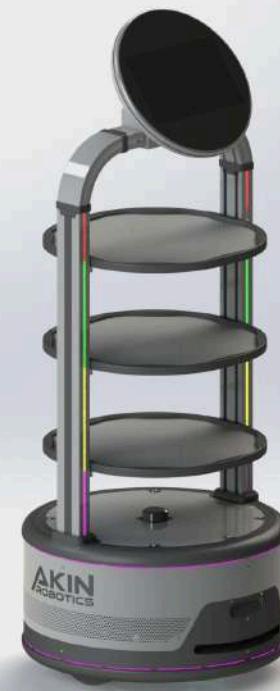

There is

Color Options

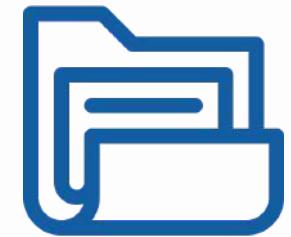

Snow White

Soft Gray
